

"We have to control methane immediately, and natural gas is the largest methane pollution source in the United States," Howarth said. "If we hit a climate-system tipping point because of methane, our carbon dioxide problem is immaterial. We have to get a handle on methane, or increasingly risk global catastrophe." ---Robert Howarth

Hear Dr. Robert K. Howarth

Robert Howarth is an Earth systems scientist, biogeochemist, and ecosystem biologist at Cornell University. In 2011, Howarth together with colleagues Tony Ingraffea and Renee Santoro published the first comprehensive analysis of the greenhouse gas footprint of shale gas in Climatic Change Letters and an invited commentary on shale gas in Nature. This work was cited in over 1,500 newspapers globally, winning Howarth an honorable mention as one of "50 People Who Matter" in the annual Time Magazine Person of the Year issue for 2011.

Sponsored by 350CT; CT Sierra Club, and Food & Water Watch

Sunday, June 12, 3 p.m. at the Connecticut Forest & Park Association, 16 Meriden Rd., Rockfall, CT

Upcoming Meetings of 350 CT:

----a climate justice organization committed to the fight for an equitable and sustainable economy that puts the health and welfare of people and the planet before profits. Join Us!
